MADE IN U.S.A.

Changing the game in **garment dyed apparel.**

It's simple. We're here to make garment dyed apparel better. Our proprietary dye process creates the vintage, lived-in look that customers crave while avoiding the costly dye migration messes of our traditional pigment-dyed competitors. Our enzyme wash finish gives ComfortWash garments the softest hand in garment dyed apparel.

We're here to make decorating garment dyed apparel easier, more profitable and less stressful. We're here to bring customers the look they love with cotton sourced from American farms. We're here to bring a whole new level of garment dyed comfort. We're here to change the game.

But don't take our word for it; experience the ComfortWash difference for yourself.

Why print on ComfortWash?

Our proprietary dye process allows decorators to be human again. Shootout, or spot out, is the process of removing accidental ink spots that result from the screen printing process using a solution similar to what is used at a dry cleaning facility. Often, pigment dyed tees cannot be spotted out because the dye in the shirt will come out along with the ink. This creates challenges, waste, lost profitability and headaches for decorators.

With ComfortWash, our garments perform at unmatched levels when spotted out.

See below for other benefits that highlight the ComfortWash difference.

Traditional Pigment Dyed Tees

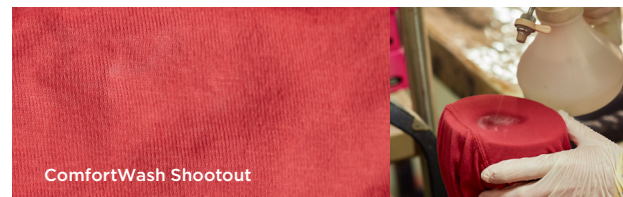

Traditional pigment dyed shirts can have an **uncomfortable and stiff** feeling that is unappealing to customers.

The dyeing process can create a broad spectrum of finished product **sizing and color variation**, causing fit and quality challenges for customers.

Using DTG pre-treat on pigment dyed shirts can result in **staining**.

The ComfortWash Difference

ComfortWash tees and fleece are enzyme washed for ultimate softness right out of the box. Perfect for consumers and retail shelves.

ComfortWash garments are strictly monitored for size and color accuracy before leaving our manufacturing facilities. Our priority is consistency!

Because we don't use pigment dye, our shirts don't stain when pre-treating for DTG embellishment.

*See [Hanes4Education.com](https://www.Hanes4Education.com) for qualifying styles. Products purchased at retail are not eligible for this offer.

Reducing carbon emissions

Hanes has reduced carbon-dioxide emissions by 28% since 2007. Additionally, the company has significantly reduced carbon emissions from the transportation of raw materials and distribution of finished products **by more than 50%** since 2008.

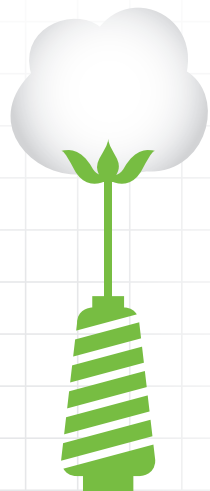

We're making products responsibly.

The key to making t-shirts – or any other type of apparel – in an environmentally and socially responsible way is to have as much control and influence over the process as possible.

Water-wise U.S. Cotton

Hanes is committed to water conservation, and has **reduced water use by 30%** since 2007.

Because cotton is a water-intensive crop, most of our cotton is grown and harvested in the Southeast – where annual rainfall generally exceeds a cotton plant's water requirements.

Low-waste

Our yarn is produced by using environmentally responsible methods in **energy-efficient facilities** that produce as little waste as possible.

Hanesbrands products keep the equivalent of nearly **60 million plastic bottles** from landfills each year.

Renewable energy

A large portion of the energy used to make Hanes apparel is **generated by biomass, hydro and geothermal energy sources** – and this helps the company avoid emissions.

Energy Star Partner of the Year – again

We're proud to announce that Hanes has been selected as a U.S. EPA ENERGY STAR **Partner of the Year 9 times in a row.**

Creation of environmentally responsible jobs worldwide

Thousands of Hanes employees around the world are committed to and play a significant role in the company's environmental responsibility program. Additionally, the company's **employees also take environmentalism to the next level** by combining it with community improvement.
